

NORTON™ SECURITY FOR PROFESSIONALS

The protection and simplicity of Norton, built for small business

We know keeping a small business running is no easy task. At Norton we want to help business professionals succeed. That's why we are focused on securing employees devices and data. Securing employees' and contractors' devices is critical to ensure uninterrupted productivity and data privacy. Norton Security is widely recognised as the leader in computer security solutions and is now available as a subscription service enabled through the Ingram Micro Cloud Marketplace.

Norton Security for Professionals:

- **Designed to mitigate security issues of a small growing business.** By working closely with the Ingram Cloud Marketplace, we make it easy to provision users with the right tools to be productive and secure. This also allows a small business to single source their user technology needs, streamlining the purchasing process.
- **Includes the full functionality of the Norton Security suite** and supports PCs, Macs, Android and iOS devices. A user subscription covers 5 devices, and monthly and annual subscriptions are available. Employees will be able to secure devices in the office and on the road without adding additional burden on IT support resources.
- **Available as a subscription service through the Ingram Micro Cloud Marketplace** and can be easily activated and deactivated as employees join or leave the team. Employees can also self manage their own devices using the Norton Management portal to add and remove devices as needed.
- **Helps protect employees from the latest malware, hackers, phishing and ransomware.** By equipping employees with the best tools to protect their devices, a business significantly reduces the risk of being critically impaired by a cyberattack.

Our constantly connected world has left us more vulnerable than ever before. But with global threat intelligence, and 24/7 threat monitoring, Norton Security for Professionals helps keep small businesses safe from even the most dangerous online threats. So the business can continue to run smoothly with peace of mind.

NORTON™ SECURITY FOR PROFESSIONALS
